

Concept Note

According to the United Nation Population Fund (UNFPA), India became most populous country in the world in the month of April, 2023, and surpasses China before expected time. In this scenario of world population in general and Indian population in particular, any development programme and policy formulation and implementation without understanding of the population trends and patterns as well as characteristics of population, will not be fruitful. Population issues and challenges are multifaceted and it is very complex because of dynamic nature of population across the globe.

The school of Extension and Development Studies Indira Gandhi national Open University New Delhi-110068

Cordially invites you to a lecture on the eve of **World Population Day**

On

Population Concerns in Twenty First-Century India
